

RunFund MVP

Problem to solve

Runners don't have a built-in incentive tied to their miles, so motivation to keep logging runs can fade, and casual savings or donating habits rarely stick without an accountability partner/assistance.

Target Market

1. College Students
2. Avid runners/cyclists
3. People saving for a “life changer”

MVP solution

RunFund turns every mile you run into money saved or donated, so your training doubles as progress toward a savings goal or a charity you care about.

Value proposition

1. Motivation to get more mileage in
2. Accountability to either save for yourself or to do some good in the world
3. Since users are potentially donating their own money at tax season there would be a record of what was donated and it could be a tax write off

Competitors

Company name	Product name	Pros and cons
Charity Miles Inc	Charity Miles Mobile App	+ Free to download, very easy and simple interface + You are “sponsored” during your activity so you aren’t using your own money + Has the ability to join teams and integrate your distance with reward programs

		– Some features are unclear to the user – Most charities are “name brand” ones and not local/regional options –
Sweatcoin		+ Free to download + Multiple ways to redeem rewards + Works alongside other walking apps – earnings are capped at 10 coins (10,000 steps) per day for free users, paid capped at 20 coins – Paid tiers, Premium members (\$4.99/month or \$24.99/year) – Realistic monthly earnings is extremely low
StepBet		+ Real stakes create stronger accountability than points or badges. + Supports several major phones, health platforms and wearables + after examining user data, it sets personalized goals instead of generic ones – PayPal is required for withdraw – Miss the required goals after warm-up and you are normally eliminated, forfeiting your stake to the game pot. – Potential legal issues with it being “gambling”
